What is Umango?

Umango delivers flexibility and efficiency in scanning, naming, indexing, converting and storing of documents. Umango is easy to install, configure, and use which translates to short and painless implementation projects.

Documents can be profiled on the panel at supported MFDs, in a browser, on a tablet or within Umango's desktop application. Once captured, the data and documents can be routed into a range of back office products, databases or network folders.

Data capture tools include zonal OCR, OMR, barcode, data lookups, key from image, and constrained list. Standard features include image enhancements, flexible document and batch separation options, full automation processing, scalability and a licensing model that has no document count limitations.

Your Umango dealer is:

FEATURES SUMMARY

GENERAL

	UMANGO CONVERT	UMANGO EXTRACT
Scalable number of jobs	X*	X*
Unlimited scans (no page count or volume limitation)	X	X
Effortless connectivity to supported MFDs	X	X
Connect to unlimited supported MFDs	X*	X*
Workstation licences are available for profiling at a desktop		X*
Web Browser support available for profiling in a browser		X
Capable of running as a Windows service	X	X
Supports AD / user authentication to access jobs	X	X

INPUT

Import XML from cost recovery systems	X	X
Import email attachments	X	
Document separator sheets (scan many documents at once)	X	X
Watch folders for new files	X	X
Batch separator sheets (extract information once and apply across all documents in a batch)		X
Capture images from web browser, tablet and mobile devices		X*
TWAIN scanner driver support (dedicated document scanners)		X

PROCESSING

Ability to validate in realtime extracted information on the touch screen of supported MFDs		X
Fully automated processing (no user intervention)	X	X
Optical Character Recognition (OCR)	X	X
Extraction of information using regular expressions and Smart Seek		X
Read barcode values (1D and 2D)		X*
Detect and delete blank pages	X	X
Optical mark recognition (detect ink in a checkbox etc)		X*
Fixed Zone and lasso OCR		X*
Adding additional threads to increase document volume throughput	X*	X*
Process images and scans in the web browser, tablet and mobile device		X
Launch custom scripts	X	X
Use auto document recognition (ADR) to detect document types		X

OUTPUT

Convert to Word / Excel	X	
Output to PDF/A and text searchable PDF/A	X	X*
Export to network folder structure	X	X
Real-time selection of export destination options during document profiling		X
Export to back office systems including document management systems, CSV, XML FTP and email	X	X*
ODBC database connectivity		X*
Export to SharePoint and SharePoint 365	X	X*
Flexible export connectivity using scripts and/or Umango's export connector SDK		X

NB: * Feature requires the purchase of additional modules or options
